Problems Facing Colleges

"All Americans should realize that, in dealing with the problem facing colleges, we are dealing with the future of our country.

What did Dr. John Hannah, president of Michigan State College, mean when he made the above remark a few days ago? How does A&T fit into this problem?

The problems no doubt face American institutions of higher education today. Some span the gamut of educational aspects and overlap in many areas. In the spring of 1964, 357,000 more high school students are expected to graduate than attended in the spring of this year. This is a growth of 19%. Can our colleges handle this number? Who will teach them? How will they be educated?

At any rate, class president, my sympathy is yours... Believe me you need it.
